Python 1 Problem Set

1. Start up the Python Interactive Interpreter. print out "Hello New York"
2. Store your name in a variable and print the contents of this variable.
3. Use nano to write a script. Make sure to include `# !/ usr / bin / python3` at the top!!

- The script should print out, your name, favorite color, favorite activity, and your favorite animal.

- Make it executable using `chmod` (only have to do this one time per script).
- Run it from the command line.

4. Use PyCharm to write the same script.

- Make it executable
- Run it from the command line.

5. Use `sys.argv` (make sure to import sys!!!) to store and retrieve 2 varibles that you print to the screen.
6. Make sure to keep your remote repository synced with your local repo. (ADD/COMMIT/PUSH)
